Summary

Senior Frontend Developer with 12 years of experience. I specialize in React / TypeScript and the architecture of large-scale client-side applications.

Beyond my core stack, I have experience with graphics, simulations, machine learning, and server-side development (Java, Node.js).

For the past 3 years I have been actively exploring tools and approaches in the AI/LLM space.

Work Experience — 12 years

VK

Russia, [vk.company/ru/](https://vk.com/company/ru/)

November 2022 — December 2025 · 3 years 2 months

Frontend Developer, Odnoklassniki portal (Java / React / TS / JS)

- Member of the core mobile-web team of the Odnoklassniki portal (7 developers) — owning the frontend core, backend interaction, and coordination with services
- Organized and carried out the migration of all feeds (4 screens, 30+ feed types and their supporting layers) from the legacy stack (Java / Graal / custom JS framework) to TypeScript + React: designed a phased migration plan and a mechanism for mutual encapsulation of components across the two stacks
- In parallel, maintained the legacy stack — building new sections and components and keeping the product stable throughout the migration
- Owned the release process: coordination, testing, production rollout, metrics monitoring, incident management, DoS/DDoS detection, and participation in mitigation
- Cross-platform debugging: physical devices, Android/iOS emulators, integration with native-app WebViews
- Delivered a series of lectures (internal and external, 30+ attendees) on neural networks and LLMs: ANN theory, local inference, tooling, MCP, strengths and limitations

Stack: React, TypeScript, Java/Graal (SSR), Jest, Storybook, BEM, TeamCity, i18n, Grafana, Graylog

AgroClub LLC

agro.club/

July 2021 — June 2022 · 1 year

Software Developer

- Built an online store and a custom CRM for grain sales and freight logistics
- Developed forms and tables, and integrated Yandex Maps

Stack: Redux-Saga, TypeScript, Styled-Components

SPB TV

Saint Petersburg, www.spbtvsolutions.com/

May 2017 — April 2021 · 4 years

Web Developer, Amediateka (SmartTV apps)

Amediateka and SPB TV streaming platforms

- Built the Amediateka SmartTV web application from scratch while maintaining the existing SPB TV application in parallel
- Designed an adaptive focus-navigation algorithm with a flexible architecture that works on an arbitrary component hierarchy
- Performed deep optimization across all app processes: virtual lists, analysis of web-technology resource consumption on SmartTV devices
- Built a library for collecting and visualizing statistics directly on the TV device, remotely controlled from a PC — an internal debugging tool for the team

Stack: React, Redux, TypeScript, LESS, Tizen, WebOS, AppleTV

Yandex

Saint Petersburg, yandex.ru

May 2016 — April 2017 · 1 year

Frontend Developer, Yandex Nirvana compute platform

Developer on Nirvana (team of 3) — a universal compute platform (a visual editor for ML/data pipelines)

- Designed and implemented a directed acyclic graph (DAG) editor based on jsPlumb, Canvas, and Google Polymer (drag-and-drop nodes, connection routing, zooming)
- Optimized rendering of the canvas layer: visible-area segmentation, Quadtrees for efficient hit-testing and rendering, and LOD for nodes at different zoom levels
- Developed the node configuration interfaces and the application configuration itself

Stack: Google Polymer, Backbone, Ampersand, jsPlumb, HTML Canvas, Gulp, Bower, Docker

Competentum

April 2014 — September 2015 · 1 year 6 months

Lead Frontend Developer

Development of a distance-learning system (team of 4 frontend and 2 backend developers)

- Organized the development process for an existing project — a distance-learning system, its authoring tool, and the user-facing application

- Mentored developers, conducted interviews, and reviewed projects
- Refactoring, developing learning-material editors, writing parsers, converters, and physics-process simulators, building interactive charts and diagrams on canvas and SVG, and migrating interactive content from ActionScript (Flash)
- To automate refactoring of legacy code, wrote a script that parses JS files and fixes errors typical for the project (autofixers didn't exist at the time)

Stack: TypeScript, ActionScript, SASS, TinyMCE, RequireJS, AngularJS

Gemini Systems

Saint Petersburg

February 2013 — September 2013 · 8 months

Web Developer, Junior Java Developer

Built a university web portal from scratch, with subsystems for document management, events, notifications, and files.

Frontend

- Markup and design theme for the portal
- Development of portlets (modules) — markup and application logic
- Adaptive system for arranging modules on the page
- 4 data presentation modes: Catalog, List, Tree
- Independently developed a Calendar module (a Google Calendar analog)
- Cross-browser compatibility — support for legacy browsers

Backend (Java)

- Contributed to server-side development
 - Completed training in Java frameworks and related technologies
-

Status-Design

Saint Petersburg, status-job.ru

May 2012 — January 2013 · 9 months

Web Programmer, Designer

- Designed websites (Photoshop, Illustrator)
- Developed website management systems (PHP, HTML, JavaScript)
- Created and modified Joomla plugins and themes
